## 1.0 INTRODUCTION

The Highways Act 1980 Section 41 and 58 clearly state that the Highway Authorities have a statutory duty to maintain the highway and must at all times take reasonable care to ensure that the highway is not dangerous and that the standard of maintenance is appropriate for a highway of that character and used by such traffic. It must also ensure that a competent person must supervise maintenance work, having received proper training with regard to the highway.

The Railways and Transport Safety Act 2003 (section 111) has inserted an additional section (41(1A)) to the Highways Act 1980 which places a duty on Highway Authorities in respect of winter conditions, as follows:-

'In particular, a Highway Authority is under a duty to ensure, so far as is reasonably practicable, that safe passage along a highway is not endangered by snow or ice'. The effective date of this duty is 31st October 2003.

In 2001, a joint group, comprising DETR, LGA, National Assembly for Wales, Northern Ireland Roads Service, SCOTS, The Highways Agency and the Audit Commission published a document entitled 'Delivering Best Value in Highway Maintenance'. This document included a section entitled 'Winter Service' which set out recommendations on how a Highway Authority could meet their legal obligations regarding winter service economically, efficiently and effectively.

In July 2005 the Code of Practice for Highway Maintenance Management titled "Well-maintained Highways" was published replacing "Delivering Best Value in Highway Maintenance"

September 2013 saw the latest and extensive update to Section 13 and Appendix H of the "Well-maintained Highways" document providing an up to ten year implementation plan which Authorities must strive to achieve to provide a robust Winter Service.

A new code of practice was published in 2016 entitled 'Well Managed Highway Infrastructure'. This stated that guidance relating to practical issues and the delivery of the Winter Service would now be contained within the National Winter Service Research Group (NWSRG) Practical Guide for Winter Service. A number of these Practical Guidance Documents were updated in March 2019.

Sefton Council Winter Service Policy and Operational Plan has been updated to seek as far as reasonably practical to comply with the revised guidance. The policy may undergo further review in light of experience during the winter season and as a result of any revised guidance.

Whilst it must be accepted that it is impossible on the grounds of both practicality and economy to prevent the formation of ice and snow on all of the borough's roads and footways, Sefton Council Highway Network Management will use its' best endeavours to meet its' statutory duty by minimising the detrimental effects of ice and snow on the highway user. In order to do this, winter service operations will be provided between the last Monday in October each year until week commencing the last Monday in March the following year.

Winter service will provide the following:

- Precautionary salting to assist in the prevention of ice formation as weather conditions dictate
- Post salting after the formation of ice and snow to assist in the thawing process as weather conditions dictate and in the appropriate circumstances as determined by competent officers
- Snow removal where it has been determined that post salting would not have a desired effect on lying snow, and the amount of snow has been determined, by competent officers, to be causing an obstruction in contravention of Highways Act 1980 (section 150).
- The provision, distribution and maintenance of grit bins.

All of the above will be provided on routes and at locations specified within the Sefton Council Winter Service Policy and Operational Plan.

### ***1.1 Policy Purpose***

---

The purpose of Sefton's winter policy is to incorporate in the policy where necessary:-

- 1) The lessons learnt from the previous winters
- 2) The recommendations of the Quarmby report
- 3) The Merseyside Winter Service Review Group shared experience
- 4) The "Well Managed Highway Infrastructure" code of practice
- 5) National Winter Service Research Group (NWSRG) Practical Guidance Documents
- 6) The UK Roads Liaison group recommendations

### ***1.2 Policy Themes***

---

The main themes of the policy are:-

- 1) Planning
- 2) Resilience
- 3) Co-ordination and collaboration with other stakeholders
- 4) Co-ordination and collaboration with other authorities
- 5) Efficient use of resources
- 6) Informed decision making.
- 7) Claims defence

### ***1.3 Policy Limitations***

---

In light of the above although the objectives are:

- To minimise delays, accidents and damage resulting from ice and snow.
- To undertake winter service effectively and efficiently.
- To try to prevent ice from forming on priority routes by precautionary gritting.
- To minimise effects of ice and snow already formed by post-gritting where possible.
- To remove snow causing an obstruction on snow clearance routes.

It will not be possible to cover all routes at all times, and the policy is based on prioritisation based on a risk analysis.

## ***1.4 Considerations in constructing levels of service***

---

### **Well-Managed Highways**

This document; Well-Managed Highway Infrastructure- A Code of Practice, provides detailed professional guidance in the management of winter services.

### **Quarmby Report**

Following national issues which arose from recent severe weather conditions, the United Kingdom Road Liaison Group Report 2009 and the Quarmby Report 2010, set out a range of recommendations which have been adopted/noted in producing Sefton's Winter Service Operational Policy.

### **National Winter Service Research Group (NWSRG)**

The NWSRG provides guidance relating to practical issues and the delivery of the Winter Service.

### **National Highways Network Management Manual**

Consideration has also been given to guidance published by the National Highways in its Network Management Manual, although it is recognised that these recommendations are generally more suited to motorways and strategic routes.

This Highway Winter Service Policy has been developed to ensure the Council acts responsibly in fulfilling its statutory duties.

## 2.0 WINTER SERVICE POLICY

### 2.1 *Extent of Service*

The Council aims to provide a winter service in anticipation of and during times of freezing conditions and snowfall. The council aims to minimise the disruption caused to residents, workers and visitors by such conditions, which, in so far as is reasonably practicable, will permit safe movement of traffic and minimise delays and accidents directly attributable to adverse weather conditions having regard to financial constraints and legal requirements.

The winter service system is divided into seven basic categories:

1. Carriageway Gritting
2. Footway Gritting
3. Cycleway Gritting
4. Grit Bin Locations
5. Footway Snow Clearance Locations
6. Carriageway Snow Ploughing
7. Non-Treatable Areas

### 2.2 *Carriageway Gritting*

The Policy includes Sefton Council's agreed salting routes proposed treatments, deployment of personnel and plant to enable precautionary salting, and snow clearance of the highway network in accordance with specified response times.

Carriageway gritting routes are based on, but are not exclusive to, the following LAA Code of Practice for Maintenance Management carriageway hierarchy:

- (a) Category 2 (Strategic Routes) \*
- (b) Category 3a (Main Distributor)
- (c) Category 3b (Secondary Distributor)
- (d) Advisory HGV routes
- (e) Access roads to hospitals
- (f) All bus routes as supplied by Merseytravel

\* The definition of Category 2 (Strategic Routes) includes Trunk Roads, however the only Trunk Road within Sefton (A5036 Princess Way / Church Road / Dunnings Bridge Road / Switch Island and their associated structures) is maintained by National Highways and does not form part of the gritting route network. Contact details for National Highways are listed in section 12.

Category 1 (Motorways) does not form any part of the highway network and is therefore not included in the gritting route network.

Bus interchanges are included in the carriageway routes where requested by Merseytravel

The routes have been designed and optimised to maximise efficiency and are identified in **Appendix A**. Additionally, there is an alphabetical summary of carriageway gritting in **Appendix G**.

In situations where Central Government impose reductions in salt supplies the Assistant Director - Highways & Public Protection will consider reverting to the revised gritting routes listed in **Appendix H**.

### ***2.3 Footway Gritting***

---

Footway gritting routes are based upon, but not wholly inclusive of, the following LAA code of practice for maintenance management footway hierarchy.

- (a) Category 1a (Prestige Walking Zone)
- (b) Category 1 (Primary Walking Route)
- (c) Category 2 (Secondary Walking Route)

Footway gritting is undertaken using dedicated All-Terrain Vehicles. Due to the nature of this operation, gritting will take place between the hours of 3 am and 7 am, when footfall is minimal.

Due to the resources required and the limited time constraints, footway gritting will be targeted to the areas of highest footfall i.e. shopping areas and business areas.

Footway routes are identified in **Appendix B**.

### ***2.4 Cycleway Gritting***

---

Under normal circumstances Sefton will not specifically grit cycleways. They will only be gritted where they form part of the approved carriageway and footway gritting routes.

### ***2.5 Grit Bin Locations***

---

Grit bins are provided, distributed and maintained on the highway at key locations. They are for use by authorised persons, in an extreme weather event, as an additional aid to provide the highway user safe passage through the borough. Locations of grit bins will be determined by the Assistant Director - Highways & Public Protection and will be based on the following:

1. Bridges with made footways over railways and canals
2. Footways on steep inclines
3. Footways on sharp bends

Each bin is checked annually and refilled before the start of the winter season. Those that are either damaged or worn will be replaced as necessary. A register of salt bins is maintained within the service to monitor salt bin issues.

It is important to note that Sefton Council has determined that the salt bin numbers are at an optimum level. A review of all locations has been carried out to ensure that all sites satisfy the Council's approved criterion for the location of a salt bin.

- There must be sufficient space on the footpath or verge in order that the bin does not cause obstruction to pedestrians or traffic sight lines and the bin can be replenished safely.
- No bins will be provided on un-adopted roads.
- Only in exceptional circumstances will a bin be located where it falls outside the defined criteria.

Salt bins will be replenished during and immediately after periods of adverse weather as resources allow. Also, should a site prove problematic because of regular misuse of salt for the treatment of private areas, vandalism of a bin or through continued antisocial behaviour attributed to the bin, Sefton Council reserves the right to remove the bin.

Salt from Council stocks will not be supplied to businesses or members of the public. Salt can be purchased from builder's merchants and DIY stores for personal use.

Grit bins will not be provided at the following locations (except in exceptional circumstances to be determined by the Assistant Director - Highways & Public Protection)

1. Footways that are included on the footway gritting routes.
2. Areas where no footway exists

Grit bin locations are identified in **Appendix C**

## ***2.6 Footway Snow Clearance Locations***

---

In an extreme weather event, when accumulations of lying snow or ice on the footway are deemed to be sufficiently excessive as to cause a potential obstruction to the free passage of the highway user, the footway gritters will be fitted with snow plough blades to assist in snow and ice clearance of footway areas. Initially, the footway snow ploughing will concentrate on the footway gritting routes as detailed in **Appendix B**

A supply of bagged salt is held in store for use and distribution as determined by either the:- Assistant Director - Highways & Public Protection; Service Manager - Transportation & Highway Infrastructure or; Highway Asset Manager

Once **Appendix B** locations have been brought to an adequate standard, the footway gritters will then be deployed to other areas based on need as authorised by the Assistant Director - Highways & Public Protection. This work will be supplemented by cleansing operatives and other staff as available. A list of available resources is included in this document at **Appendix I**.

A schedule of cleared areas will be kept on file.

## ***2.7 Carriageway Snow Clearance***

---

All 8 gritting routes are serviced by gritters which have snow plough blades attached. When accumulations of lying snow on the carriageway are deemed to be sufficiently excessive as to cause a potential obstruction to the free passage of the highway user, snow ploughing of as much of each individual route will be undertaken in addition to the gritting operation but only at locations where it is safe to do so and where such ploughing will not cause a further problem by creating obstructions of ploughed snow.

In normal winter conditions, gritting routes are driven in one direction only. The gritter will drive on one side of the road whilst gritting both sides. In snow conditions, the duty officer may instruct the contractor to plough and grit the additional ploughing routes as detailed in **APPENDIX J**. Further detail is provided in section 7.5.

## ***2.8 Non Treatable Areas***

---

Trunk Roads are maintained by National Highways.

All locations and routes within the borough not previously identified in this document do not form part of the winter service and are therefore deemed non-treatable areas

### **3.0 HIGHWAY NETWORK MANAGEMENT**

Highway Network Management will be responsible for the Winter Service Plan and its subsequent revisions based upon Cabinet Member approval and Government legislation. This plan will include the following:

- Specifying standards
- Defining gritting routes
- Decision making process
- Performance monitoring
- Specifying requirements
- Providing salt
- Providing grit bins and distribution locations
- Providing duty officer rotas

## 4.0 CONTRACTOR

The contractor will be responsible for:

- Contract compliance
- Winter gritting operations
- Provision of sufficient drivers and fitters
- Provision of vehicles as directed
- Fuel for winter service fleet
- Annual insurance of winter service fleet
- All Salt Depot facilities including salt storage barn
- Weighbridge recording and validation of all vehicle transactions
- Vehicle fleet tracking information

## 5.0 QUALITY MANAGEMENT

### 5.1 *Document Control and Circulation*

---

The controlled copy of the Winter Service Policy and Operational Plan document will be held in Highways & Public Protection - Highway Network Management Unit. Copies will be distributed to the following officers:

- Chief Executive
- Assistant Director - Highways & Public Protection
- Assistant Director – Operational In – House Services
- Service Manager – Transportation & Highway Infrastructure
- Highway Asset Manager
- Duty Officers
- Contractor
- Sefton Corporate Communications
- All Elected Members

Further copies will be distributed as deemed appropriate by the Assistant Director - Highways & Public Protection

### 5.2 *Decision Making Process*

---

The greatest safeguard for the protection of the travelling public is to instigate precautionary salting treatment. This is the advanced application of salt applied to a road to prevent ice forming and snow settling.

Precautionary salting provides an effective treatment aimed at ensuring the safe movement of vehicles and is carried out on roads prioritised in accordance with the routes on the website and on the attached appendices. These priorities have been the subject of the Councils democratic approval process and cannot be randomly amended by officers within the service.

The Duty Officers, as per the rota, will maintain close contact with the key contacts, throughout the winter period. This along with maintaining a wider communication network with other agencies and advisors, as recommended within the LGA report on winter services, will help share critical information and improve the decision making process.

The quality of decisions made by the Duty Officers will be the key factor in determining both the effectiveness of the Winter Service and also how it is perceived by road users. In these circumstances, a 'learning organisation' culture is crucial to the continued improvement of the service.

The decision making process is influenced by the Winter Service Guidance for Local Authority Practitioners (published following the Quarmby Review 2010). References to changes to NWSRG Guidance are noted below: (Please note these may be further changed over time and continuous references to the latest guidance issued to Local Authorities should be used when reading this document).

The decision to carry out winter service operations in accordance with the designated route priorities will be made by the Duty Officer. The decision is made based on the weather

forecasting information received from MetDesk, aided by the Decision Making Matrix shown in [Section 7.2](#) and where appropriate taking account of any relevant local intelligence.

To be both cost-effective and efficient, salt should be spread before ice forms or snow settles on the roads. Anticipating these conditions and reacting correctly depends on a mixture of local knowledge and experience, interpretation of the MetDesk weather forecast and knowledge of the state of the road and the temperatures at that time.

All decisions with regard to gritting will be undertaken by the duty officer who will be on duty on a rota basis 24 hours per day during the winter season. The decision will be based on analysis of actual conditions monitored against forecast data. Appropriate members of Highway Network Management staff will support the duty officer, during normal office hours with information and additional resource, if required.

Requests for spot gritting by the Police will be referred via Sefton ARC to the Winter Services Contractor for assessment and actioned in liaison with Highway Network Management.

In the event of snow being forecast, the Duty Officer will inform the Highway Asset Manager at the earliest opportunity to discuss the proposed level of response. The Highway Asset Manager will involve other officers as deemed appropriate in determination of the initial response. When an extreme weather event is forecast, the Highway Asset Manager will discuss the forecast with the Assistant Director - Highways & Public Protection / Service Manager - Transportation & Highway Infrastructure who will call together the Extreme Weather Event Team (EWET) in order to initiate the Council's stage 2 response should they deem this appropriate. Out of normal working hours, the Highway Asset Manager will inform the Assistant Director - Highways & Public Protection / Service Manager - Transportation & Highway Infrastructure who will decide if deemed necessary to call members of EWET to a meeting either out of hours or on the next working day. Cover by appropriate officers will be arranged in the absence of either the Service Manager - Transportation & Highway Infrastructure or the Highway Asset Manager. All decisions will be logged on the service providers decision making page, as well as the Councils own internal diary facility.

Relevant personnel involved in the winter service operation will have the appropriate level of training in both systems and meteorology and comply with health and safety regulations. Training will be updated as necessary.

### ***5.3 Response Times***

---

For precautionary gritting, the response time will be one hour to attend and open the operational depot, plus three hours to load and weigh the gritting vehicles and complete the gritting operation. When snow ploughing is undertaken in isolation or in conjunction with the gritting operation, the time to load the gritting vehicles and complete the gritting operation will be extended to four hours. The duty officer reserves the right to specify a required time to commence the gritting operation in excess of these timings should conditions allow such flexibility.

For post gritting (after the formation of snow and ice) the response time will be one hour to attend the operational depot, plus four hours to load and weigh the gritting vehicles and complete the gritting operation.

For footway gritting the response time will be one hour to attend the operational depot, plus two and a half hours to load and weigh the gritting vehicles and complete the gritting operation. When snow ploughing is undertaken in isolation or in conjunction with the

footway gritting operation, the time to load the gritting vehicles and complete the gritting operation will be extended to three and a half hours

#### ***5.4 Data Provision and Liaison Arrangements***

---

Weather forecasts and consultancy is provided by MetDesk, Station Approach, Buckinghamshire.

Forecast information is accessed via data gathering equipment and analysed using computer software provided by Vaisala Limited. Computer equipment undergoes pre and post season servicing, whilst weather stations also receive an additional mid-season check to ensure accuracy of information.

Fleet tracking information is accessed via data gathering equipment, is recorded and analysed at the C-Track data centre provided by C-Track, Park House, Leeds and delivered via private cloud infrastructure to an internet ready device. C-Track computer equipment undergoes regular updates and servicing and vehicle tracking units are maintained periodically to ensure accuracy of information.

Regular meetings are held with Liverpool City Region colleagues to discuss various highway maintenance issues including Winter Service as a standard agenda item. A representative of Vaisala Ltd. and MetDesk will attend the pre, mid and post season meetings.

Cross border communication with adjacent Local Authorities and with National Highways will take place to ensure the conditions presented by strategic routes are as consistent as possible. To aid the information to the public variable message signs (VMS) will be operated whenever possible to provide information on availability of routes (including lanes which are open and closed) and general instruction be given to the public to assist management of traffic. See section 13 for further details and a list of VMS locations.

In addition, liaison will also be undertaken as necessary with the following bodies:

- |  |  |
|--|--|
| <ul style="list-style-type: none"><li>▪ <b>Merseyside Police</b><br/>Traffic Management<br/>Maghull Police Station<br/>Westway<br/>Maghull L31 OAA</li></ul> | <ul style="list-style-type: none"><li>▪ <b>Merseytravel</b><br/>1 Mann Island<br/>Liverpool<br/>L3 1BP</li></ul> |
|--|--|

This liaison may result in minor alterations to gritting routes which will only be approved in extreme circumstances by the Assistant Director - Highways & Public Protection.

Operational In – House Services will be notified as and when footway gritting has been undertaken to enable the suspension of sweeping operations on the footway gritting routes. Relevant contact numbers are provided and kept up-to-date by the Cleansing Services Manager.

In severe conditions with lying snow or ice on footways, liaison will be undertaken with Operational In – House Services to co-ordinate available resources in snow and ice removal activities.

Further liaison will be implemented when deemed necessary in line with the Council's stage 2 response to an extreme weather event

#### ***5.5 Information Recording and Analysis***

---

Because of the possibility of a civil action for damage due to s41a Highways Act 1980 (as in the introduction of this document) it is essential that readily accessible records are kept of both the

- decisions made and reasons for them
- times and locations of de-icing and snow clearing activities.

These records can be used for producing speedy and accurate information to members and the public regarding the progress made during an extreme winter weather event. The records will also be used when reviewing the service thus:

- All information relating to the winter service operation and the decision making process will be recorded.
- Fleet tracking information relating to the winter service operation will be recorded through tracking system supplied by the contractor.
- All requests for service during normal office hours will be recorded onto the departments Mayrise system with the appropriate decision taken in accordance with the winter service policy and operational plan.

## ***5.6 Performance Monitoring and Annual Review***

---

The winter service policy will remain in its approved form until such time as there is a need to review it.

The Winter Service Policy and Operational Plan and the Extreme Weather Event Plan will be reviewed at the end of each winter season. Any required amendments will be made prior to the start of the next winter season and will be presented to Cabinet Member (Highways & Locality Services) and, where appropriate, Cabinet for approval and adoption.

Performance in the following areas will also be monitored annually:

- Hardware and Software
- Weather Forecasts and support consultancy
- Duty Officers
- Contractor Compliance
- Response Times
- Salt Supply and Availability
- Communication

As well as the continuous monitoring of the delivery of the plan there will be three formal reviews

1. Pre-season. A meeting just before the winter service period to check that preparations are complete and reporting procedures are in place.
2. After a period of severe adverse weather to plan recovery and monitor re-stocking
3. At the end of the winter service season. To evaluate the effectiveness of the plan as delivered over the winter and to agree on areas for review and change before the following winter.

## **6.0 WEATHER FORECASTING AND CONDITION MONITORING**

### **6.1 Weather Stations**

---

Sefton Council has installed weather stations at the following locations:

- Benthams Way, Southport (referred to as Southport site)
- Rock Lane, Maghull (referred to as Rock Lane Site)

The stations are provided and maintained by Vaisala Limited and are equipped with sensors to monitor air and road surface temperatures, rainfall, humidity, road surface conditions and the residual salt on the road. In addition arrangements have been made to allow access to weather information from weather stations in Liverpool, Knowsley, St Helens, Wirral, Warrington and Halton.

### **6.2 'Icecast' Ice Prediction System**

---

The duty officer, to assist in making decisions with respect to winter service operations, can access the information provided by the weather station. The weather stations can also be accessed by MetDesk in their production of weather forecasts for the Authority.

Access to the data is made via Vaisala 'Icecast' ice prediction system utilising 'Navigator' computer software. This system displays the weather station and forecast data in graph, map and tabular displays of current, historic and forecast data. The software is delivered from the Vaisala data centre via private cloud infrastructure to an internet ready device. Dedicated passwords are provided to all duty officers to allow individual access.

### **6.3 Thermal Mapping**

---

Some sections of a highway will always be warmer or colder than others. Local environmental factors and prevailing weather conditions determine this pattern of temperature variation. On a winter's night minimum road surface temperatures may vary over the network, creating problems when dealing with snow and ice hazards. Thermal Mapping is a vehicle-based survey technique, scientifically proven to identify and quantify the distribution of temperature differences across a network.

The majority of the roads included on the Authority's carriageway gritting routes have been thermally mapped, and the data included in the ice prediction system. This enables the duty officer to consider the weather conditions throughout the borough, rather than relying solely on the data at the locations of the weather stations.

### **6.4 'MetDesk' Weather Forecast Service**

---

MetDesk is contracted to provide the weather forecasting service to the Authority on a daily basis for the winter season. Whilst the official season lasts from week commencing the last Monday in October until week commencing the last Monday in March, the forecast services are provided from 15th October until 30th April each year.

MetDesk weather service consists of the following elements:

- A daily 24-hour forecast predicting weather conditions for the 24-hour period from 12:00 noon on the day of issue. The forecast information is supplied in both graphical and textual formats.

The graphical format shows the predicted forecast for the period based on road surface temperatures and weather conditions. This data is monitored by the Duty

Officer. Updates will be issued by the forecast provider if the actual recorded temperature falls 2 degrees below the minimum forecast road surface temperature.

The text gives additional forecast information which is read in conjunction with the graph and is issued in three forms:

**Green** Ice formation extremely unlikely

**Amber** Ice formation possible

**Red** Ice formation extremely likely

- A 24 to 48 hour forecast predicting weather conditions for the following 24 to 48 hour period. The forecast information is provided in both graphical and textual formats.
- A three to five day forecast provided on a daily basis giving an early indication of the likely conditions for the next 5 days.
- A 6 to 10 day outlook for the region giving an early indication of any potential weather hazards.
- A daily morning summary which gives a review of the previous 24 hours and an early indication of the likely weather for the coming 24 hours.
- A 24 hour helpline direct to the forecast room at MetDesk. The duty officer can therefore contact the forecaster at any time to discuss conditions.
- The information includes:
  - Road surface temperatures
  - Air temperature
  - Dew temperature
  - Relative humidity
  - Precipitation
  - Surface state – ice/snow/wet/moist/dry.
  - Wind direction

### ***6.5 Timing of Forecast Information***

---

The daily forecasts will usually be produced by MetDesk between 12.00 and 13.00 each day. It is the responsibility of the duty officer to check the forecast to make a preliminary assessment of the coming evening's weather conditions. The daily forecast is updated each evening between 18.00 and 19.00 to advise the duty officer of any significant changes to the earlier forecast.

In the event of the likelihood of an extreme weather event, an interim forecast has been introduced to be provided after receipt of the morning summary report but prior to the usual daily afternoon forecast. This forecast will be delivered as necessary to provide an early warning and give officers the opportunity to make the necessary preparations in accordance with either the stage 1 or stage 2 response.

## **7.0 DECISION MAKING AND REPORTING PROCEDURE**

### **7.1 Condition Monitoring**

Depending on the conditions on any night, it is the responsibility of the duty officer to monitor the forecast, contacting MetDesk as necessary for clarification of any uncertainties. The first forecast is received at lunchtime each day during the winter season with updates provided as necessary. The duty officer monitors these forecasts against actual recorded temperatures and conditions recorded at the weather stations. This process will continue until such time that the duty officer can make a decision on the need to grit. Precautionary carriageway gritting will be undertaken when ice formation can reasonably be predicted based on forecast information combined with actual weather station sensor data.

### **7.2 Carriageway Gritting**

Once a decision has been made to grit the carriageway routes, the duty officer will contact the Winter Service Contractor to enact the gritting operation either immediately (when the response times will be relevant) or conversely at a specific time. If a time is specified, it cannot be shorter than the agreed response time. In addition, the duty officer will advise MetDesk of the decision to grit.

Where conditions allow, the gritting operation will be timed to avoid the evening and morning rush hours as the gritting operation may be hampered by traffic congestion. It is accepted, however, that this is not always possible.

All decision-making information is recorded on MetDesk's decision board and the Councils own winter service diary log.

The Sefton Council Highway network is prone to disruption caused by infrastructure works, highway, utility and development works, or by traffic congestion. This requires that a flexible approach to delivering the routes is adopted. The sequence of streets in the routes is only indicative and if circumstances dictate the streets listed can be delivered in any order. Gritter drivers will be instructed to vary their routes according to traffic, weather or other considerations. Having this flexibility written into the plan will help when repudiating any claims generated by adverse weather. Accurate recording of the streets actually treated is important and can be carried out by vehicle trackers or paper records, and any failure to treat a street must be recorded with the reasons why that street was not accessible to a gritting vehicle and what reasonably practicable steps were taken in order to gain access and treat the highway.

#### **De-icing method**

The majority of winter service treatments in the UK are precautionary. NWSRG Guidance recommends that sufficient salt should be spread to:

- Prevent frost and ice formation
- Prevent ice or snow bonding to the carriageway
- keep spread rates as low as practicable for the forecast conditions and road surfaces considered
- maximise cost savings
- Increase resilience
- Minimise impact on the environment

## Recommended Spread Rates

Table 1 below recommends appropriate spread rates and is to be used as a guideline by duty officers as good practice.

The duty officer applies the NWSRG treatment guidance appropriate to the route, including but not limited to traffic levels, road surface type, climactic conditions, salt condition, vehicle capabilities and residual salt considerations.

### NWSRG Recommended Spread Rates

Treatment Matrix '8,6.8 Treated Salting (g/m <sup>2</sup> )			
Weather Conditions Road Surface Conditions Road Surface Temperature (RST)	Treatment		
	Recommended Salting (g/m <sup>2</sup> )	Sefton's Treatment (g/m <sup>2</sup> )	Ploughing
RST at or above -2°C and dry/damp or wet road conditions	7	10	No
RST between -2.1°C to -3°C and dry/damp road conditions	7	10	No
RST between -2.1°C to -3°C and wet road conditions	10	10	No
RST between -3.1°C to -4°C and dry/damp road conditions	7	10	No
RST between -3.1°C to -4°C and wet road conditions	13	13	No
RST between -4.1°C to -5°C and dry/damp road conditions	8	10	No
RST between -4.1°C to -5°C and wet road conditions	16	16	No
RST between -5.1°C to -7°C and dry/damp road conditions	11	11	No
RST between -5.1°C to -7°C and wet road conditions	22	22	No
RST between -7.1°C to -10°C and dry/damp road conditions	16	16	No
RST between -7.1°C to -10°C and wet road conditions	31	31	No
Light snow forecast	15	20	No
Medium/heavy snow or freezing rain forecast	30	30	Yes
Freezing Rain	30	30	No

The minimum spread rate that Sefton use is 10g/m<sup>2</sup>. Comparisons with previous years gritting operations have confirmed that this covers the majority of scenarios for routine

gritting, without the need for detailed analysis of mitigating factors such as wind speed, surface conditions etc, Gritting above these spread rates is normally confirmed in conjunction with the winter service manager,

The maximum amount of salt that can be spread in one gritting run, without the need to return to the depot to re-load, involving all planned routes across Sefton's network, is 20g/m<sup>2</sup> Therefore, in situations where time constraints dictate, a full network treatment will be undertaken at 20g/m<sup>2</sup> rather than treating only part of the network at a higher rate.

**Further Salting actions and considerations (supporting information):**

This is the action taken to remove ice and snow that has already formed on the road. These roads are prioritised and detailed in on our website: <http://www.sefton.gov.uk>

## Carriageway decision matrix

### Sefton Council's Salting Options shown in red

Road Surface Temperature	Precipitation	Predicted Road Conditions		
		Wet	Wet Patches	Dry
May fall below 1C	No Rain	Salt before Frost	Salt before freezing (see note a)	No action likely, monitor weather (see note a)
	No Hoar frost			
Expected to fall below 1C	No Rain	<b>(Option 1)</b>	<b>(Option 2)</b>	<b>(Option 3)</b>
	No Hoar frost			
	No Fog			
	<u>Expected</u> hoar frost		Salt before freezing (see note b) <b>(Option 2)</b>	
	<u>Expected</u> fog			
	<u>Expected</u> rain before freezing	Salt after rain stops (see note c) <b>(Option 4)</b>		
	<u>Expected</u> rain during freezing	Salt before freezing, as required during rain and again after rain stops (see note d) <b>(Option 4)</b>		
	<u>Possible</u> rain	Salt before frost		Monitor weather conditions
<u>Possible</u> hoar frost	<b>(Option 1)</b>		<b>(Option 3)</b>	
<u>Possible</u> fog				
Expected snow		Salt before snowfall <b>(Option 1)</b>		

The decision to undertake precautionary treatments should be, if appropriate, adjusted to take account of residual salt or surface moisture.  
All decisions should be evidence based, recorded and require continuous monitoring and review.

- a) Particular attention should be given to the possibility of water running across carriageways and other running surfaces e.g. off adjacent fields after heavy rains, washing off salt previously deposited. Such locations should be closely monitored and may require treating in the evening and morning and possible on other occasions.
- b) When a weather warning contains reference to expected hoarfrost, considerable deposits of frost are likely to occur. Hoarfrost usually occurs in the early morning and is difficult to cater for because of the probability that any salt deposited on a dry road too soon before its onset, may be dispersed before it can become effective. Close monitoring is required under this forecast condition which should ideally be treated just as the hoarfrost is forming. Such action is usually not practicable and salt may have to be deposited on a dry road prior to and as close as possible to the expected time of the condition. Hoarfrost may be forecast at other times in which case the timing of salting operations should be adjusted accordingly.
- c) If, under these conditions, rain has not ceased by early morning, crews should be called out and action initiated as rain ceases.
- d) Under these circumstances rain will freeze on contact with running surfaces and full pre-treatment should be provided even on dry roads. This is a most serious condition and should be monitored closely and continuously throughout the danger period.

- e) Weather warnings are often qualified by altitudes in which case differing action may be required from each depot.
- f) Where there is any hint of moisture being present, a pessimistic view of the forecast should be taken when considering treatment to negatively textured surfaces.

**Sefton Council Salting Options**

Option 1	Option 2	Option 3	Option 4
<b>Salting on all routes</b>	<ul style="list-style-type: none"> <li>a) Precautionary salting all routes or,</li> <li>b) On occasions where the roads are generally dry with sporadic wet patches but have been treated on at least two previous evenings without rainfall, a spot treatment option may be considered</li> </ul>	<ul style="list-style-type: none"> <li>a) Precautionary salting all routes or,</li> <li>b) On occasions where the roads are generally dry with sporadic wet patches but have been treated on at least two previous evenings without rainfall, a spot treatment option may be considered.</li> <li>c) Monitor through scouting</li> </ul>	Precautionary salting all routes <ul style="list-style-type: none"> <li>a) If possible after rainfall and prior to ice forming</li> <li>b) During rainfall where unavoidable due to freezing road surface temperatures</li> <li>c) If necessary after rainfall</li> </ul>

**Standard Operating Procedures**

The duty officer as per the rota, will be responsible for organising salting operations required 24 hours per day, 7 days per week including bank holidays and over the Christmas and New Year period. These arrangements will also ensure that sufficient operational staff are also available during these periods.

Generally, operations will consist of a pre-salting exercise during which designated roads are treated. Dependant on the weather forecast pre-salting operations will commence early evening and be fully completed by prior to midnight.

Precautionary salting will be one hour to attend the operational depot, plus three hours to load and weigh the gritting vehicles and complete the gritting operation.

The Well Managed Highways code of practice recommends the introduction of a comprehensive and accurate record keeping system. At present such information is kept electronically on the Sefton Council's database and in hard copy formats.

**Prolonged or Severe Weather Events**

During periods of sever or prolonged weather events (i.e. when normal operations cannot be maintained), the network can be reduced to treating just the strategic routes. Strategic

routes are defined as those routes that are essential to the continuance of business, emergency services, social and educational needs and any other critical establishments.

During severe weather events, Sefton Council is to ensure that salt stocks are used effectively and conserved where practical.

The decisions made by the Duty Officers regarding treatment levels, may on occasions be affected by salt stocks held at the time.

The decision to reduce salting to include only the critical network must be communicated to other districts to enable mutual aid and operational issues and must receive Assistant Director approval.

Table 2 below shows the points at which the automatic re-ordering of salt from the supplier are triggered.

**Table 2**

Required minimum stock levels for commencement of season	Minimum stock (tonnes)			Maximum stock (tonnes)
	Oct-Dec	Jan - Feb	April	
	3500	2500	1000	3500

**NB: Sefton salt usage**

Actions:

Grit bin stock refilling activities may be suspended until minimum levels increase.

Winter service manager is to contact supplier to inform of reduction in local service delivery and need for urgent supplies in line with Stock management protocols established within tendered contract conditions (minimum deliveries to return Authority to 'Minimum Stock Holding levels, i.e. 12 Days resilience).

It should be noted that no supplier of Salt in the UK engages in guaranteed supply contracts and therefore is not reasonably practicable to secure a guaranteed supply

**7.3 Footway Gritting**

On a night when the carriageway gritting operation has been undertaken, the footway routes will also be gritted, providing the conditions remain suitable for such action. When there is any doubt, the Duty Officer will assess the conditions and if icy conditions persist, will instruct the contractor to grit the footway routes. Any decision will be recorded. In addition, the duty officer will advise Operational In - House Services of the decision to grit the footways in order to suspend any planned sweeping activities on the footway gritting routes.

**7.4 Additional Gritting**

Sefton will not accede to requests to grit areas which do not form part of approved gritting routes other than in exceptional circumstances, for example, where standing water is evident due to unforeseen circumstances.

When conditions dictate, the duty officer will instruct the contractor to double the rate of spread on all bridges, steep slopes and roundabouts that are included in the gritting routes.

**7.5 Snow Ploughing**

In the event of snow being forecast, the Duty Officer will inform the Highway Asset Manager at the earliest opportunity to discuss the proposed level of response. The Highway

Asset Manager will involve other officers as deemed appropriate in determination of the initial response. When an extreme weather event is forecast, either in or out of normal working hours, the Highway Asset Manager will inform the Assistant Director - Highways & Public Protection / Service Manager - Transportation & Highway Infrastructure who will determine whether it is necessary to call together the Extreme Weather Event Team (EWET) in order to initiate the Council's stage 2 response. This meeting will be either the same day, out of hours or on the next working day. Cover by appropriate officers will be arranged in the absence of either the Service Manager - Transportation & Highway Infrastructure or the Highway Asset Manager.

When deemed necessary, the duty officer will instruct the contractor to plough and grit both the suitable sections of the usual routes and the additional ploughing routes (as detailed in **APPENDIX J**) These additional routes will not allow for ploughing of the entire route but are designed to treat the sections of existing gritting routes, where it is possible and safe to do so. The ploughing locations will be based, as far as possible, on bus routes and have been designed in liaison with Merseytravel.

Many of the locations included on the gritting routes are not suitable for ploughing as such an operation would leave the highway in a dangerous state due to the position of the ploughed snow. Ploughing will therefore only be undertaken where it is safe to do so. This is likely to be multiple lane carriageways and dual carriageways where one lane could be ploughed without causing a problem to pedestrian traffic.

Any revisions to the ploughing routes will only be authorised in extreme circumstances by the Assistant Director – Highways & Public Protection or nominated officer.

## ***7.6 Additional Grit Bins***

---

Requests for additional grit bins will be considered based on the criteria stated in this policy and operational plan. Where the request meets these criteria, a bin will only be placed if a suitable exact location can be found and there is sufficient funding available.

## **8.0 PERSONNEL AND TRAINING**

### **8.1 Lead Officer**

---

The lead officer in the delivery of the winter service policy and operational plan is as follows:

Highway Asset Manager  
Highways & Public Protection  
Magdalen House  
Trinity Road  
Bootle L20 3NJ  
0151 934 4321  
[network@sefton.gov.uk](mailto:network@sefton.gov.uk)

Any enquiries with regard to the content or delivery of this policy should be directed here in the first instance

### **8.2 Duty Officer**

---

Throughout the specified winter season, one duty officer will be available 24 hours a day. The period each officer will be on duty will run from Monday morning until the following Monday morning when the duty will pass to the next officer on the rota.

Officers will be on duty from week commencing the last Monday in October until week commencing the last Monday in March each season.

All duty officers will have the appropriate training. All have been trained in the use of the Icecast and Navigator systems. In addition, all have been trained in the following:

- Introduction to Meteorology
- Factors affecting road surface temperature
- Winter road hazards
- The ice prediction infrastructure, thermal mapping and Roadcast
- Interpretation of forecasts

The duty officer rota contains confidential information including home telephone numbers and is recorded in a separate document.

### **8.3 Supervision**

---

As the gritting operation is generally undertaken out of normal working hours, supervision of the contractor will be monitored by the C-Track system. The Duty Officer can access the C-Track data when required using the C-Track Online interface. The Duty Officer represents the Assistant Director - Highways & Public Protection in all aspects of the Winter Service Operation. The Duty Officer is contacted either by mobile telephone or via Sefton Security services on 0151 922 6107. On the occasion where the winter service operation is undertaken during normal working hours, supervision will be undertaken by relevant officers in liaison with the duty officer.

#### **8.4 Contractor**

---

The contractor will provide sufficient drivers, fitters and support staff to undertake the gritting operations from 15th October until the following 30th April. Drivers will be qualified to drive heavy goods vehicles and will familiarise themselves with the gritting routes prior to the start of the winter season. The contractor will ensure the Working Time Directive (2003) is adhered to.

Operatives will wear appropriate protective and high visibility clothing conforming to the requirements of BS6629: 1985. Garments will provide the highest degree of conspicuity – Class A with sleeves to appendix G.

#### **8.5 General**

---

All personnel involved in the winter service will work in accordance with Health and Safety at Work Act 1974 and all other relevant legislation.

The following personnel will be equipped with a mobile telephone:

- Duty Officer
- Contractor Supervisor
- All Gritter Drivers
- Call Out Mechanic

## **9.0 WINTER SERVICE DEPOT PROCEDURES**

### ***9.1 Depot Facilities***

---

The winter service depot is located in Heysham Road, Netherton. A location plan is included at **Appendix E**

The depot is equipped with a purpose built Salt Barn for the storage of salt, and a weighbridge supplied by Avery Weigh-Tronix (formerly Central Weighing Ltd). The weighbridge is computer linked to the Council for the accurate measurement, usage monitoring and restocking of salt.

### ***9.2 Procedure***

---

Once called out, all drivers will attend the depot opened within one hour. The vehicles, which are stored in the depot, will then be loaded with the appropriate amount of salt.

During the loading operation, the gritting vehicle will be left in gear with the handbrake on. The driver should remain out of the cab, keeping a safe distance until the loading has been completed.

Once loaded, the contractor will ensure the gritting vehicle is driven over the weighbridge and will verify the recording of both the time and the amount of salt it has been loaded with. (The unladen weight of the vehicle is previously programmed into the weighbridge computer system). On return to the depot after completion of the gritting route, the contractor will ensure the gritting vehicle is again driven over the weighbridge and verify the recording of the time and the amount of salt used.

### ***9.3 Post Operation***

---

All gritting equipment will be returned to storage unless otherwise directed by the duty officer.

Due to the anti-corrosion qualities of the 'Safecote' additive in the salt, the vehicles will NOT be washed down at any time, except at the specific request of the Highways Network Management.

The contractor will ensure that the salt depot is secured.

## 10.0 WINTER SERVICE GRITTING FLEET

### 10.1 General

- All Gritting vehicles are supplied by the contractor in accordance with the contractual arrangements.
- It is the contractor's responsibility to ensure that vehicles are tested and maintained in accordance with the manufacturer's recommendations.
- All spreaders are calibrated in accordance with NWSRG Guidance.
- The contractor will insure all vehicles and drivers.
- The Contractor will work with the spreader manufacturer (Econ) on calibration on spreader vehicles pre-season to ensure compliance with NWSRG Guidance.

### 10.2 Carriageway Gritting Fleet

Sefton operates the winter service for carriageway gritting utilising 8 gritting routes. In order to facilitate the operation, there is a fleet availability of 10 vehicles calibrated in accordance with NWSRG Guidance. The vehicles are provided by the contractor by contractual arrangement.

Vehicle Registration	Vehicle Type	Age (2023)
PN68 XWJ	Leyland DAF LF-260 18T Chassis	5 years
PN68 XWK	Leyland DAF LF-260 18T Chassis	5 years
PN68 XWL	Leyland DAF LF-260 18T Chassis	5 years
PN68 XWM	Leyland DAF LF-260 18T Chassis	5 years
PN68 XWO	Leyland DAF LF-260 18T Chassis	5 years
PN68 XWP	Leyland DAF LF-260 18T Chassis	5 years
PN68 XWR	Leyland DAF LF-260 18T Chassis	5 years
PK68 PYT	Leyland DAF LF-260 18T Chassis	5 years
PK68 PYU	Leyland DAF LF-260 18T Chassis	5 years
PK68 PYV	Leyland DAF LF-260 18T Chassis	5 years

### 10.3 Footway Gritting Fleet

The footway gritting fleet will comprise of the following equipment which is provided by the contractor by contractual arrangement:

Vehicle Registration	Vehicle Type	Age (2023)
YG23 USW	Yamaha Kodiak 450 ATV	New
YG23 USX	Kodiak 450 ATV	New
YG23 UTJ	Kodiak 450 ATV	New
YG23 UTK	Kodiak 450 ATV	New
	Turbocast 800 Towable Spreader	4 years
	Turbocast 800 Towable Spreader	4 years
	Turbocast 800 Towable Spreader	4 years

#### **10.4 Loader**

Gritting vehicles are loaded using the following loader which is provided by the contractor by contractual arrangement:

Vehicle Registration	Vehicle Type	Age (2023)
MK20 MZV	JCB 535-95	2 years

## 11.0 SALT

### 11.1 Salt Stock

The salt stock is located at the winter service depot in Heysham Road, Netherton. It is stored in the dedicated salt barn. Prior to the start of the season, salt levels are restored to an agreed level in preparation for the coming winter. Currently, the commencing stock level is 3,500 Tonnes. A restocking profile is agreed with the salt supplier whereby salt stocks are replenished throughout the winter season when key points are reached on the restocking profile. A copy of the Salt Restocking Profile is included in **Appendix F**

Salt is supplied by: Compass Minerals (Salt Union),  
De-Icing Business,  
Winsford Rock Salt Mine,  
Winsford,  
Cheshire,  
CW7 2PE.

Salt type utilised: 'Thawrox' Plus

'Thawrox' Plus is an enhanced form of 'Thawrox' 6 rocksalt, containing 3% of a de-sugared molasses product 'Safecote'

'Safecote' has been shown to inhibit the corrosion potential of de-icing salt. It can also enhance the spreading characteristics of the salt and improve adhesion to the road surface. When it is added to rock salt immediately after mining and elevation, the result is an easily handled salt with increased corrosion resistance.

Test methods are as specified in BS 3247:1991 'Salt for Spreading on Highways for Winter Maintenance or Equivalent'. Anti-caking and 'Safecote' testing methods are proprietary.

Stocks are stored as described above.

The arrangement for salt supply is reviewed periodically to ensure value for money and sustainability. The contract does not have a guarantee clause, UK suppliers do not offer this.

Mutual aid is considered by the Merseyside Consortium Winter Service group in order to provide support for neighbouring authorities based upon stocks.

The Council has access to stock levels to a maximum capacity of 250k tonnes of government strategic stock, although this is available to all councils therefore only part would be accessible to Sefton CC. This in line with new Government guidelines to ensure that councils have a minimum of 12 days resilience (increased from previous 6 day recommendations).

Best endeavours are undertaken to confirm loading methods ensure minimum loss and salt is taken from within the pile and tested monthly during the winter season to ensure moisture levels are within the optimum range as per the NWSRG Guidance.

The Council has developed a stock management arrangement with its supplier to prevent stock levels falling to a critical point. However, a limited supply chain prevents an absolute solution to the potential for interruptions to salt supplies both regionally and nationally. To mitigate this possibility national and regional arrangements have been put in place:

250,000 tonnes of salt reserves have been arranged by Government with protocols in place for Sefton Council to access these reserves during severe weather events.

### 11.2 Chemical Specification

PROPERTY	UNIT	SPECIFICATION
Soluble Chlorides	%m/m NaCl	>90.0
Soluble Sulphate	%m/m CaSO <sub>4</sub>	<2.5
Insolubles	%m/m	<7.5
Anti-caking agent	mg/Kg	>30.0
'Safecote'	%m/m	2.5-3.5

### 11.3 Grading

PASSING BS 410 TEST SIEVE	SPECIFICATION %m/m
10 mm	100
6.3 mm	100
2.36 mm	30 – 80
0.3 mm	< 20

Each individual load received has its own test documentation provided on the reverse side of the delivery note.

Should the need arise to undertake additional testing of the salt, this will be arranged in liaison with the salt supplier.

### 11.4 Moisture Calibration

Sefton regularly check the salt condition, by testing samples taken from existing stockpiles as well as new deliveries. This method is done on a monthly basis and provides data to aid the decisions for salting spread rates factoring in salt condition.

### 11.5 Treatment Rate

All carriageway routes shall be gritted in accordance with the Decision making process in Section 7.2

All footway routes are gritted with 10 gm/sq. m unless otherwise directed by the duty officer.

## ***11.6 Additional Salt Stocks and Equipment***

---

1,000 bags of salt are stored for distribution whenever conditions dictate and the decision is taken that it is necessary to utilise them. The decision to distribute bags of salt and the prioritisation of locations will be taken by the Assistant Director - Highways & Public Protection in liaison with EWET as appropriate.

300 snow shovels have been placed into store to be utilised when necessary. Shovels will be provided to internal staff who are redeployed for snow clearance (refer to **Appendix I** for details) and also communities if deemed appropriate by the Assistant Director - Highways & Public Protection.

## 12.0 SERVICES PROVISION

### 12.1 *Weather Station Hardware and Software*

---

All weather station hardware and software is provided by:

**Vaisala Ltd**

Birmingham Office  
6230 Bishops Court  
Birmingham Business Park  
Birmingham B37 7YB, UK  
0121 683 1200

### 12.2 *Forecasting and Consultancy Support*

---

All forecasting and consultancy support is provided by:

**MetDesk**

3 Station Approach  
Wendover, Buckinghamshire  
HP22 6BN  
01296 623888

### 12.3 *Salt Supply*

---

All salt is supplied by:

**Compass Minerals (Salt Union) Limited**

De-Icing Business  
Winsford Rock Salt Mine  
Winsford  
Cheshire, CW7 2PE  
0870 532 9393

### 12.4 *Weighbridge Supply and Maintenance*

---

The weighbridge is supplied and maintained by:

**Avery Weigh-Tronix**

Foundry Lane  
Smethwick  
West Midlands  
B66 2LP  
0845 246 6730 Option 3  
[www.averyweigh-tronix.com](http://www.averyweigh-tronix.com)  
[serviceresponse@awtxglobal.com](mailto:serviceresponse@awtxglobal.com)

### 12.5 *Winter Service Contractor*

---

The winter service contractor is:

**Grayson's H&E Services**

Kedros  
Moss Side  
Formby  
L37 0AE

## **12.6 Safecote**

---

Safecote is supplied by:

### **Safecote**

17 Queen Anne's Gate  
Westminster  
London  
SW1H 9BU  
0207 233 4547  
www.safecote.com

## **12.7 Fleet Tracking Hardware and Software**

---

All fleet tracking hardware and software is provided by:

### **C-Track (North Region)**

Park House  
Headingley Office Park  
8 Victoria Road  
Leeds  
LS6 1LG  
0845 200 1215  
www.C-Track.co.uk

## **12.8 National Highways**

---

Trunk Roads within Sefton are maintained by:

### **National Highways (Area 10)**

Atlantic House  
Birchwood Boulevard  
Warrington  
WA3 7WE  
01925 298084  
[adnwteam@nationalhighways.co.uk](mailto:adnwteam@nationalhighways.co.uk)

## **12.9 Emergency Planning Team**

---

Emergency Planning is implemented and co-ordinated by:

### **Emergency Planning Team**

Magdalen House  
30 Trinity Road  
Bootle  
L20 3NJ  
0151 934 2187

## 13.0 COMMUNICATION

### 13.1 Communication

---

All communication will be through:

**Sefton Corporate Communications**

First Floor, Magdalen House  
30 Trinity Road  
Bootle  
L20 3NJ  
0151 934 2720

In the event of an extreme winter weather event, the corporate communications team will coordinate the provision of information on weather status and Sefton's response. Where necessary, the call centre will be provided with updates for communication with the public. This will include updates provided by the relevant departments on:

- Weather
- Sefton's response
- Availability and accessibility of Services including schools and social care

The Corporate Communications team will also liaise with colleagues at Merseyside Police and other agencies who might assume a media lead in the event of a declared weather emergency.

The call centre will also be utilised for distribution and exchange of information throughout the winter during normal conditions and in the event of an extreme weather event.

During extreme weather, relevant information can be collated and e-mailed to Elected Members, partner organisations and stakeholders. It can also be fed into a press release or other public information. In addition to the provision of information to the call centre, Sefton's website will have an (Extreme) Weather Update link with all the most up to date information available, along with links to access other services. This will occupy a prominent position on the council website homepage and be updated where necessary throughout the working week, with the potential for weekend updates if required by the Extreme Weather Event Team. (This will be dependent on remote access and the robustness of the council's web content management system.) During a prolonged event it may also be necessary to include some 'Frequently Asked Questions' and general information which can be accessed via a link on the council website

Relevant information displayed on Sefton's website will also be highlighted on the council's Twitter feed (@seftoncouncil). The Highway Network Management team will also have access to the council's Twitter account and will 'tweet' information when gritting has taken place as well as other advice.

### ***13.2 Variable Message Signs***

---

Information will be placed on Sefton's Variable Message Signs to advise highway users of conditions and action whenever possible

Variable Message Signs have been installed at the following locations:

- A565 Water Lane (west of Baytree Close)
- A570 Southport Road, Kew (by Tesco exit road)
- A565 Formby Bypass, Woodvale (approach to Southport Old Road signals)
- A5758 Brooms Cross Road, Thornton (before roundabout at Park View)
- A565 Crosby Road South, Seaforth (northbound on approach to flyover)

### ***13.3 Out of Hours Communication***

---

Out of hours communication with Sefton can be made via the Sefton ARC Service on 0151 922 6107

### ***13.4 Other Contacts***

---

Any other contacts for information dissemination will be via corporate communications team.

## **14.0 EXTREME WEATHER EVENT RESPONSE**

### ***14.1 Introduction***

---

The Winter Service Policy and Operational Plan has been designed to be implemented in response to the usual weather conditions traditionally experienced in the borough of Sefton. This document is reviewed after every winter season with adjustments made as deemed necessary and suitable. This is Sefton's 'Stage1' response. When conditions are expected to be of a more severe nature for which the usual response would be deemed to be either ineffective or less than satisfactory, the Extreme Weather Event Plan will be enacted. This is Sefton's 'Stage2' response. Typically, such conditions could include:

- Extreme snow fall
- Extremely low temperatures
- Lower than usual temperatures or continued snowfall over an extended period
- A weather event which will have the potential to affect the general delivery of Council services for the vulnerable.

Should conditions dictate, Sefton's Emergency Plan will be enacted. This is Sefton's 'Stage3' response

The process for establishing the need to enact this plan and the implementation process will be covered in this controlled document.

### ***14.2 Staged Response***

---

1. Winter Service Policy and Operational Plan
2. Extreme Weather Event response
3. Emergency Plan

### ***14.3 Civil Contingency Act 2004***

---

The Civil Contingency Act 2004 requires a Local Authority as Category 1 responders to plan for a range of emergencies, including prolonged extreme or adverse weather. This Plan sets out how Sefton Council will respond to such situations; and its particular arrangements for maintaining, as far as is reasonably practicable, a free flowing highway network which is part of its Winter Service Policy and Operational Plan.

### ***14.4 Extreme Weather Event Team***

---

In the event of a significant extreme or adverse weather event which greatly reduces the availability and condition of the highway network, impairs the ability of the Council to deliver key services and/or has a significant impact on the wellbeing of Sefton residents, businesses and visitors, the Council will activate its Extreme Weather Event Plan as the stage 2 mechanism for its response.

The Extreme Weather Event Team (EWET) comprising appropriate Senior Officers, will oversee and co-ordinate the Council's response. Depending on conditions and the potential effect on the various areas and needs of the community, relevant officers will be called upon to join the team to assist with issues which are within their remit.

The initial team will comprise some or all the following officers or their representatives as necessary to co-ordinate the Council's response:

- Assistant Director – In – House Services
- Assistant Director - Highways & Public Protection
- Assistant Director - Children's Social Care
- Assistant Director - Adult Social Care
- Assistant Director - Corporate Resources
- Service Manager - Transportation & Highway Infrastructure
- Highway Asset Manager
- Assistant Director – Strategic Support
- Call Centre Manager

In addition to the above officers, the Cabinet Member (Highways & Locality Services) will be invited to attend and play an active role in determining the extent of the Council's response to an extreme weather event.

As a key part of co-ordinating the Council's response, the EWET will determine:

- The prioritisation of services
- The redeployment of workers towards essential response tasks
- The suspension of services when deemed non-essential
- The provision of additional gritting and snow clearance activities
- The monitoring of expenditure in relation to the Council's response
- Liaison with other Sefton Service Providers
- Liaison with other districts and emergency services via a Strategic Co-ordination Group (SCG) and / or a Tactical Co-ordination Group (TCG) which may be chaired by Merseyside Police
- The provision of information for Elected Members, public and internal communications.

It is acknowledged that in the event of major disruption a regional co-ordinating arrangement may be activated in the form of a Strategic Co-ordination Group (SCG) and / or a Tactical Co-ordination Group (TCG) chaired by Merseyside Police. A designated officer from the Council will attend Strategic and / or Tactical Co-ordination meetings and provide a link between regional and national response arrangements.

Extreme adverse weather event forecasts from weather forecasting services will be communicated to key Council service providers and Elected Members.

### ***14.5 Policy Compliance***

---

This policy document sets out the Council's proposed response both to general winter weather and in the event of extreme weather. Based on previous experience and traditional conditions experienced in Sefton, it is believed that the response detailed within this policy will be adequate in most events. Should the Assistant Director - Highways & Public Protection or his nominated officers believe that a particular situation may justify a response that falls outside the limitations of this policy, he will make any additional

provision in discussion and with the approval of the Cabinet Member (Highways & Locality Services).

Any such decisions will be logged.

#### ***14.6 Corporate Response Arrangements***

---

The detailed operational arrangements to maintain the highway are set out in the Winter Service Policy and Operational Plan (Stage 1 response), which forms part of this document.

The Extreme Weather Event (Stage 2) response will address the following issues in addition to the detailed highway infrastructure response

#### ***14.7 Corporate Support***

---

One of the priorities of EWET will be the redeployment of staff towards essential response tasks. Corporate Support will monitor levels of attendance and provide advice and support to those departments seeking to redeploy non-essential staff to essential response activities. Communication channels will remain open with trades unions throughout any extreme weather event period to address any staff concerns.

No decisions on closure of building or services will be made that remove potential redeployment of staff available for designated emergency support tasks. Suitable supervision, training, equipment and instruction will be provided to any groups of staff undertaking work beyond their normal experience. In all cases staff must make every effort to attend their normal place of work. They may be directed to other locations and tasks as part of the response to an extreme weather event.

Decisions with regard to Schools rest with individual Head Teachers. Advice has been provided in the Schools Emergency Management Guidance documentation circulated to all schools.

A summary of the work groups available for redeployment is included in **Appendix I**. The redeployment of staff operational priorities will be determined by EWET and coordinated by Highway Network Management.

## 15.0 Availability of Additional Resources

### 15.1 Resources

---

In extreme snow conditions where gritting and ploughing operations as identified in the stage 1 policy document are deemed to be either insufficient or too localised, the EWET will call on additional resources as required and target them to locations of high importance based upon local conditions. These resources are identified in **APPENDIX I**.

Other resources from the 3<sup>rd</sup> Sector and Community payback schemes will be investigated and utilised as available and as authorised by the Assistant Director - Highways & Public Protection.

## APPENDIX A Carriageway Gritting Routes

Carriageway gritting routes have been designed and optimised to maximise efficiency. The routes cover a total of 220 miles, representing 35% of the total carriageway network. For an alphabetical listing of roads gritted please see Appendix G.

## APPENDIX C Grit Bins

Grit bins will be placed on site during the month of October each year, prior to the commencement of the official winter season and filled with salt

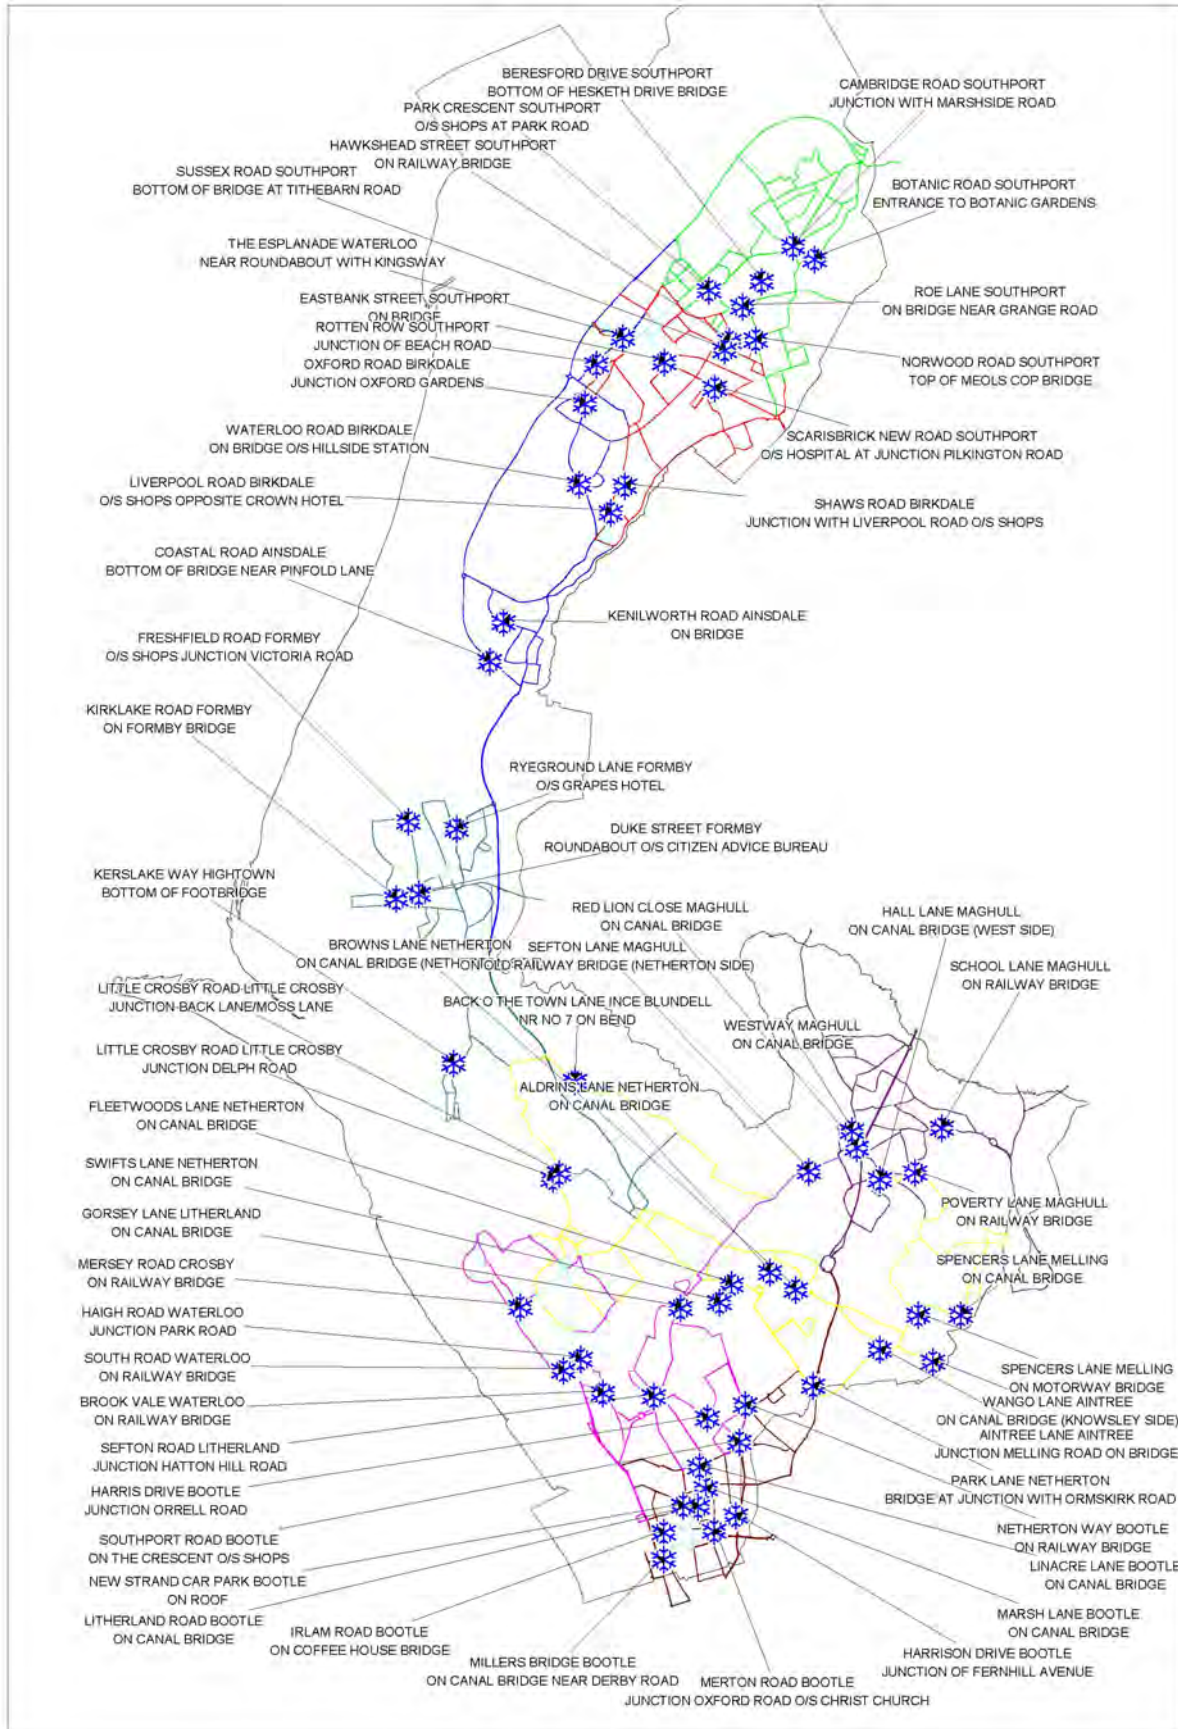

Grit bins will be monitored on an ad hoc basis throughout the winter season and the contractor will be instructed to re-fill them when deemed necessary.

One grit bin will be placed at each of the following locations:

Location	Detailed Location
Aintree Lane, Aintree	Junction Melling Road on bridge
Aldrins Lane, Netherton	On canal bridge
Back O The Town Lane, Ince Blundell	Near No 7 on bend
Beresford Drive, Southport	Bottom of Hesketh Drive bridge
Botanic Road, Southport	Entrance to Botanic Gardens
Brook Vale, Waterloo	On railway bridge
Browns Lane, Netherton	On canal bridge (Netherton side)
Cambridge Road, Southport	Junction with Marshside Road
Coastal Road, Ainsdale	Bottom of bridge near Pinfold Lane
Duke Street, Southport	Roundabout o/s citizens advice bureau
Eastbank Street, Southport	On bridge
Esplanade, Southport	Near roundabout with Kingsway
Fleetwoods Lane, Netherton	On canal bridge
Freshfield Road, Formby	O/s shops junction Victoria Road
Gorsey Lane, Litherland	On canal bridge
Haigh Road, Waterloo	Junction Park Road
Hall Lane, Maghull	On canal bridge (west side)
Harris Drive, Bootle	Junction Orrell Road
Harrison Drive, Bootle	Junction Fernhill Avenue
Hawkshead Street, Southport	On railway bridge
Irlam Road, Bootle	On Coffee House Bridge
Kenilworth Road, Southport	On bridge
Kerslake Way, Hightown	Bottom of footbridge
Kirklake Road, Formby	On Formby Bridge
Linacre Lane, Bootle	On canal bridge
Litherland Road, Bootle	On canal bridge
Little Crosby Road, Little Crosby	Junction Delph Road

Location	Detailed Location
Little Crosby Road, Little Crosby	Junction Back lane/Moss Lane
Liverpool Road, Birkdale	O/s shops opposite Crown Hotel
Marsh Lane, Bootle	On canal bridge
Merton Road, Bootle	Junction Oxford Road o/s Church
Mersey Road, Blundellsands	On railway bridge
Millers Bridge, Bootle	On canal bridge near Derby Road
Netherton Way, Bootle	On railway bridge
New Strand Car Park, Bootle	On roof
Norwood Road, Southport	Top of Meols Cop Bridge
Oxford Road, Birkdale	Junction Oxford Road
Park Crescent, Southport	O/s shops at Park Road
Park Lane, Netherton	Bridge at junction with Ormskirk Road
Poverty Lane, Maghull	On railway bridge
Red Lion Close, Maghull	On canal bridge
Roe Lane, Southport	On bridge near Grange Road
Rotten Row, Southport	Junction Beach Road
Scarbrick New Road, Southport	O/s hospital at junction of Pilkington Road
School Lane, Maghull	On railway bridge
Sefton Lane, Maghull	On old railway bridge (Netherton side)
Sefton Road, Litherland	Junction Hatton Hill Road
Shaws Road, Birkdale	Junction with Liverpool Road o/s Shops
South Road, Waterloo	On railway bridge
Southport Road, Bootle	On the Crescent o/s shops
Southport Road, Formby	O/s Grapes hotel
Spencers Lane, Melling	On canal bridge
Spencers Lane, Melling	On motorway bridge
Sussex Road, Maghull	Bottom of bridge at Tithebarn Road
Swifts Lane, Netherton	On canal bridge
Wango Lane, Aintree	On canal bridge (Knowsley side)
Waterloo Road, Birkdale	On bridge o/s Hillside station
Westway, Maghull	On canal bridge
<b>Total Grit Bin Provision</b>	<b>58</b>

# MAP C1 Grit Bin Locations

## APPENDIX D Footway Snow Clearance Priorities

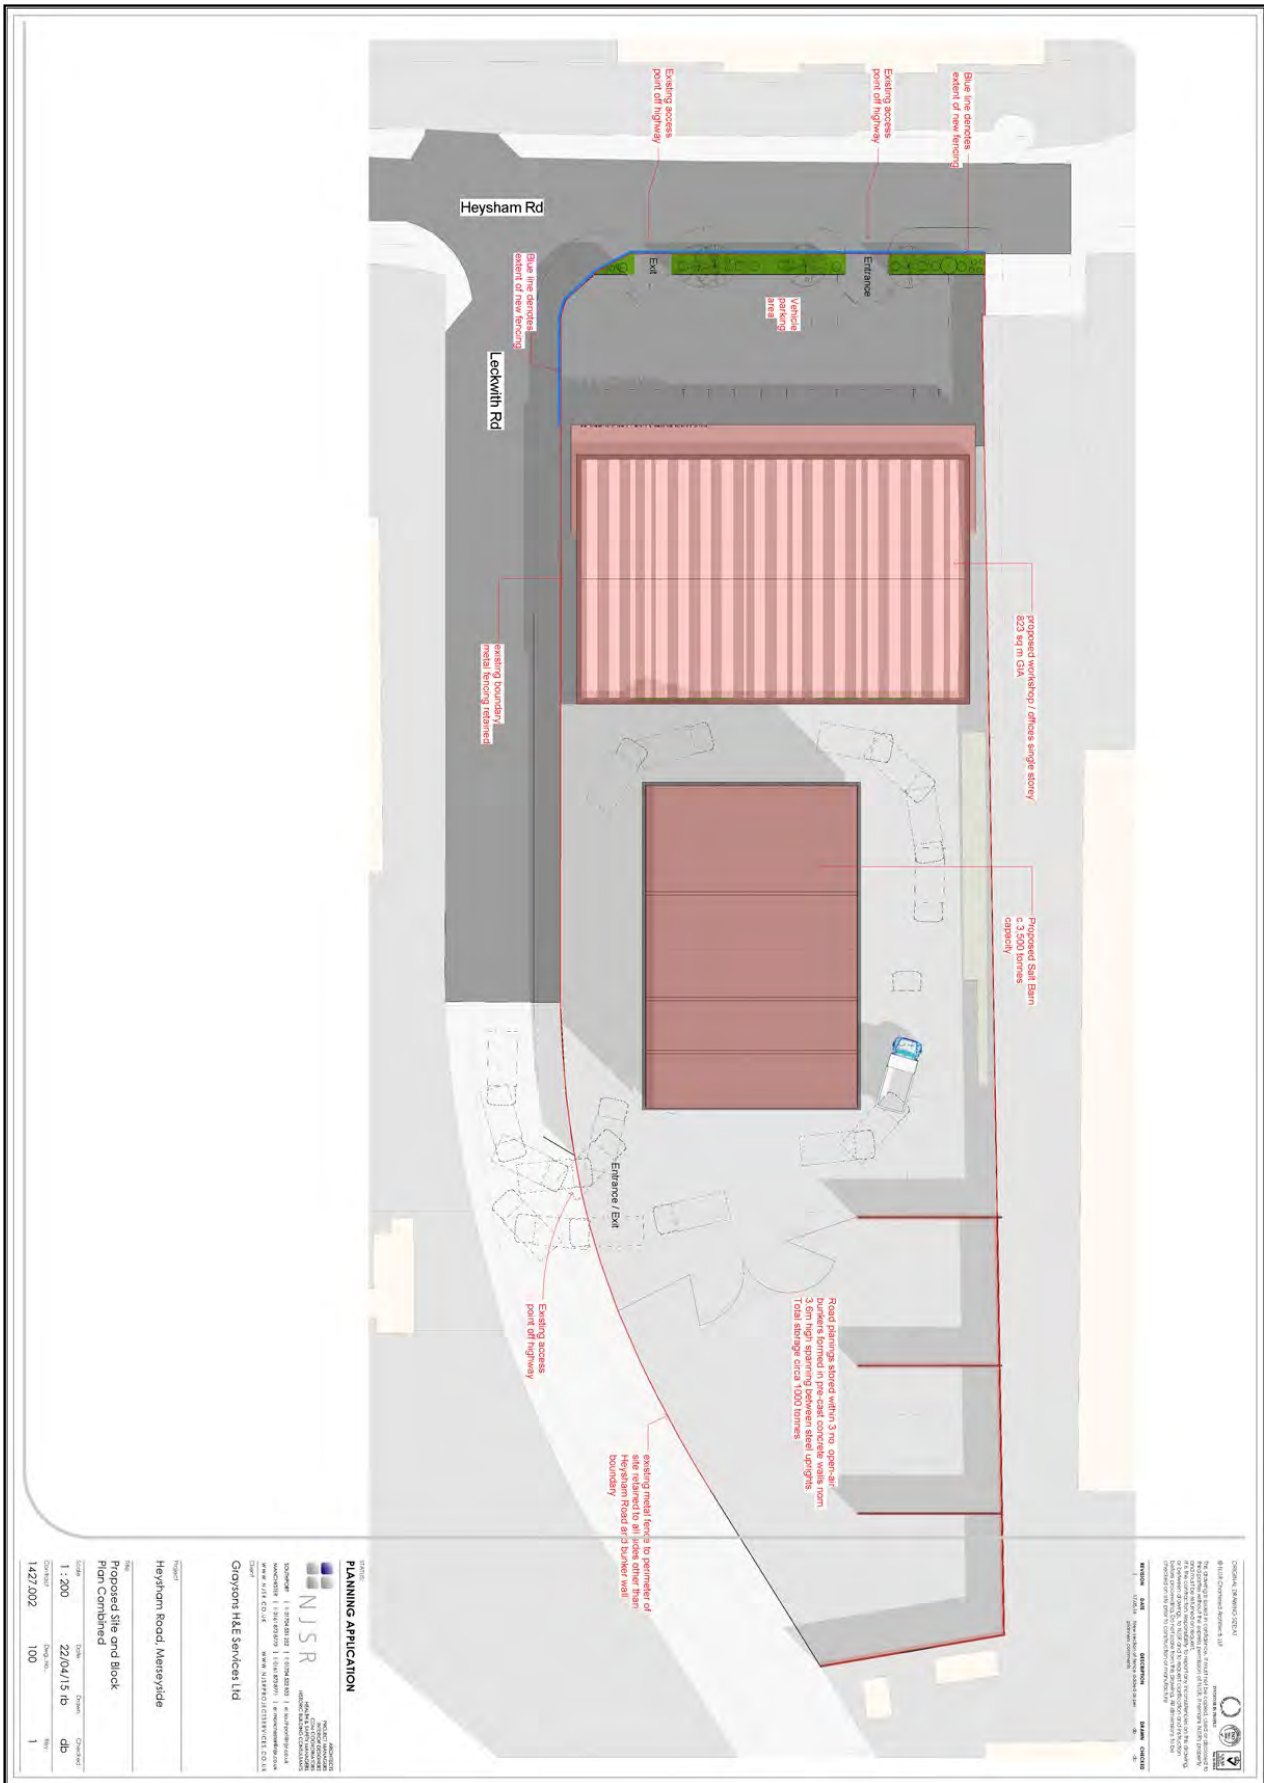

Snow clearance priorities will include the following locations:

Location	Extent
Stanley Road, Bootle	Boundary to Linacre Road
Linacre Road	Stanley Road to Bridge Road
Bridge Road	Linacre Road to Seaforth Road/Church Road
Knowsley Road	Stanley Road to Grey Street
Marsh Lane	Stanley Road to Railway Station
Washington Parade	Marsh lane to Canal Bridge
Crosby Road North	Great Georges Road to Liverpool Road
South Road	Crosby Road North to Mount Pleasant
St. Johns Road	Crosby Road North to Level Crossing
Liverpool Road	Crosby Road North to The Bypass
Crosby Village	Pedestrianised Area (Liverpool Road/Moor Lane)
Richmond Road	Moor Lane to Little Crosby Road
Little Crosby Road	Richmond Road to Cooks Road
Islington	Cooks Road to Coronation Road
Coronation Road	Islington to College Road
College Road	Coronation Road to Sunnyside Road
Lord Street	Duke Street to Leicester Street
Scarisbrick Avenue	Lord Street to Promenade
Nevill Street	Lord Street to Promenade
London Street	Lord Street to Chapel Street
Chapel Street	London Street to Eastbank Street
Eastbank Street	Lord Street to Roundabout
Town Lane, Kew	200 m either side of Hospital Entrance
Liverpool Road, Birkdake	Level Crossing to Bolton Road
Station Road, Ainsdale	Level Crossing to Roundabout
School Lane, Formby	Church Road to Three Tuns Lane
Three Tuns Lane	School Lane to Crompton Road
Chapel Lane	Three Tuns Lane to Brows Lane
Halsall Lane	Chapel lane to Furness Avenue
Station Road Melling	Railway to Tailor's Lane
Westway, Maghull	Northway to Liverpool Road North
Liverpool Road North	Westway to Red Lion Bridge
Altway	Bradfield Avenue to Ormskirk Road
Aintree Lane	Holy Rosary to Ormskirk Road
Molyneux Way	Altway to Aintree Lane
Copy Lane	Netherton Grange to Ormskirk Road
Marian Square	Glovers Lane to Glovers Lane
Magdalen Square	Glovers Lane to Glovers Lane
Glovers Lane	St Oswalds Lane to St Jeromes Lane
Sefton Road	Osborne Road to School Lane
Botanic Road	Cambridge Road to Manor Road
Manor Road	Botanic Road to Cambridge Road
Cambridge Road	Manor Road to Botanic Road

The above locations are inclusive of the footway gritting routes which will be the first to be treated for snow clearance by deployment of the footway gritters with snow plough blades attached. Any action will then be supplemented by any available operations staff.

# APPENDIX E Depot Location

The Winter Service Depot is located on Heysham Road, Netherton

## APPENDIX F Salt Restocking Profile

Week Number	Stock Profile	
	MAX	MIN
1	3,500	3,000
2	3,400	2,880
3	3,300	2,760
4	3,200	2,640
5	3,100	2,520
6	3,000	2,400
7	2,900	2,280
8	2,800	2,160
9	2,700	2,040
10	2,600	1,920
11	2,500	1,800
12	2,500	1,680
13	2,500	1,560
14	2,500	1,440
15	2,500	1,320
16	2,275	1,200
17	2,050	1,080
18	1,825	1,000
19	1,600	1,000
20	1,450	1,000
21	1,300	1,000
22	1,300	1,000
23	1,300	1,000
24	1,300	1,000
25	1,300	1,000
26	1,300	1,000
27	1,300	1,000

The above chart shows the maximum and minimum salt stock levels at any time during the winter season. As salt is used to grit the highway, the stock level will drop. The salt levels will be monitored by the Highway Network Management Team using the dedicated weighbridge software and once the minimum stock levels are reached, additional salt will be ordered from the salt supplier to replenish the stocks up to the appropriate maximum level as indicated on the chart for the time of the season. Revised Guidance on resilience levels mean that it is no longer possible to allow the salt stock to diminish significantly until near the end of the season. This system ensures that there will always be sufficient salt available.

## APPENDIX G Summary of Roads Gritted

The table below shows an alphabetical list of all roads scheduled for gritting

Alphabetical Road Listing				Table 1/7
USRN	GRIT LOCATION	ROAD FROM	ROAD TO	ROUTE NO
34100014	AGNES ROAD, BLUNDELLSANDS	WHOLE LENGTH		4

## **APPENDIX I      List of Available Resources**

---

### **Internal Resources**

Operational In - House Services has approximately 140 staff that may be available to be redeployed onto snow clearance if their substantive role is suspended by their director. This could potentially be supplemented by another 50 staff from Leisure activities and Coast. These staff could potentially be deployed to clear snow and spread grit at the locations detailed in the grit bins section above. This would negate to need to involve private citizens and therefore reduce the Council's risk. These services currently have 1 small tractor at Botanic Gardens, 2 4x4 tractors one Bobcat and 7 Landrovers at Ainsdale Discovery Centre, 6 small gritting spreading machines (3 North & 3 South) plus a snow plough attachment for the bobcat & forklift truck and 1 large spreader unit for the use on a 7.5 Tonne vehicle. Some or all of these operatives and equipment may be utilized as required at no additional cost to the Council.

In addition to this, snow plough blades have been purchased for the footway gritters. This will allow for a much quicker and more suitable response to snow clearance from footways. The first priority will remain the agreed footway routes; however this provision could then be targeted at other key locations to assist with snow clearance.

Such operations will require additional grit supplies and further stocks will be purchased and retained for particular use in an extreme weather event as available.

### **External Resources**

The following contractors have resources available to assist the Council during an extreme weather event. They have identified both equipment and operatives for the Council to call on:

- Popes (Hightown) Ltd.
- Dowhigh
- The Landscape Group
- RM Services

Confidential information regarding call out contact numbers and costs are held separately to this document

## APPENDIX J Additional Carriageway Snow Ploughing Locations

The table below shows an alphabetical list by town of all roads scheduled for ploughing after an extreme weather event.

ROAD NAME	TOWN	SECTION	CARRIAGEWAY	Route
CHERRY ROAD	AINSDALE	WHOLE LENGTH	NORTHBOUND	3

## APPENDIX K Carriageway Snow Ploughing Routes

Carriageway snow ploughing routes have been designed and optimised to maximise efficiency. The additional routes cover a total of 96 miles, representing 16% of the total carriageway network which will be ploughed only when extreme weather has occurred. There are three additional ploughing routes plus amendments to two gritting routes (5P and 6P). For an alphabetical listing of roads ploughed in extreme weather events please see Appendix J.

HEYSHAM ROAD DEPOT ADDITIONAL PLOUGHING ROUTE 1		Table 1/2
LOAD: 4.16 tonnes of salt, set to spread at a rate of 10.0g/sqm over an average width of 7.2 m, for post plough gritting ONLY.	PLOUGHING MILEAGE	35.91
