Supplementary planning guidance note

Settlement Character Plan

Southport

December 2003
1. Introduction

a. We have produced Settlement Plans to describe the main features that make up the character of each of the five urban districts in Sefton. The districts are based on the existing settlements of Bootle, Crosby, Maghull, Formby and Southport. The Settlement Plans consist of these guidance notes and the accompanying map, available from the planning department.

b. The Settlement Plans identifies the distinct character areas within each district, and are based on patterns of land use, building type and period of development. Physical features such as key routes, landmarks, junctions and boundaries are shown. The plans also indicate the locations where Design Statements must be prepared and submitted with a planning application.

c. The plans should be used to develop a scheme that responds positively to its context. Each plan also includes area-based design guidance that addresses specific issues relevant to that settlement area and must be taken into account when developing a scheme.

d. This guidance note and the settlement plans are based on an Urban Design Study of Sefton. The tables below refer to information gathered by the study.

e. Some of the technical terms in this guidance are explained in a glossary at the back of the Design SPG. These terms are indicated by a ‘G’, the first time they appear in each section of the SPG.

2. Assessment of the Local Character of Southport

a. Southport is effectively a product of the 19th Century, developing from a collection of fisherman’s huts in the late 18th Century into a fashionable resort by the mid 19th Century. The first phases of development saw the reclamation of the foreshore dunes with streets laid out in a rectilinear gridiron pattern between Lord Street and the Seafront promenade. Within this grid there developed a range of leisure, commercial uses along with large Victorian villas and terraces. The growth of the town in the late 19th/early 20th Century continued this grid-iron layout but with variations that give the town subtle variety in its form and character.

b. Development to the south and north of the town centre is characterised by large detached and semi detached houses set in large plots within a curvilinear grid layout. To the south this development is confined to the west of the Liverpool – Southport railway line and takes in the Victorian settlement of Birkdale. This general pattern is continued but with semi-detached properties on smaller plots from the inter-war period both to the east of the railway and to north.

c. Ainsdale, separated from Birkdale by golf courses and dunes, has a Victorian centre next to the station which is surrounded by 1930’s semi-detached properties. The Victorian and Edwardian residential development to the east of the town maintain the tight rectilinear grid-iron pattern of the centre with pockets of industrial premises located within the blocks.

d. Churchtown to the northeast of the town centre, although incorporated by Southport’s expansion in the 19th Century, predates it as a settlement. It’s more organic form is still visible within the surrounding grid.

3. Broad Character Zones (Residential)

</tr>
</tbody>
</table>
5. Areas of Local Distinctiveness

a. Areas of Local Distinctiveness are more closely defined areas within the district that have either retained their original character or illustrate a distinct or important period of growth a particular settlement. Achieving a high standard of design will be particularly important in these areas in order to preserve or enhance their established character.

b. The following have been defined as Areas of Local Distinctiveness within the area covered by Southport Settlement Plan:

- **Southport Seafront**
- **Lord Street**
- **Westbourne Road, Birkdale**

</table>
**6. Design Guidance**

**a.** We have developed the following guidance from an assessment of the strengths and weaknesses of the area as set out in the above tables. The guidance gives more detailed advice to support the policies set out in the UDP and the Borough-wide guidance in Part 1 of the Design SPG.

**b.** The guidance is in two parts, firstly there is district–wide advice relating to the Broad Character Areas; secondly there is more detailed guidance relating to the Areas of Local Distinctiveness. Here a high standard of design is required to preserve or enhance their established character.

---

**District-wide Guidance**
c. Within the Southport Plan Area
development proposals will need to:

- Maintain or reinstate back of pavement retail or commercial activity in Ainsdale, Birkdale & Churchtown Local Centres. Development should respect historic plot widths and building heights.

- Strengthen or create appropriate landmark or gateway features to reinforce the sense of entry into Southport Town Centre & Local Centres from main road approaches.

- Backland or infill development within existing residential areas should respect scale, form, & layout of surrounding development.

- Improve quality of boundary treatments & landscape to Crowland Street, Fylde Rd & Philips Works Industrial Estates.

- Strengthen & enhance quality of pedestrian linkages between various elements of Southport Town Centre, Meols Cop Retail Park & Churchtown Local Centre & their surrounding residential areas.

- Retain or reinstate period detailing, features or original materials including the retention of boundary walls, gateposts or other external features within residential areas.

- Maintain existing levels of tree coverage in respect to both street trees and those within individual plots.

Local Distinctiveness Guidance

d. In addition to the above guidance the following guidance is applicable to proposals within the following Areas of Local Distinctiveness.

**Southport Seafront:**

- Development proposals, including conversions and changes of use, will be expected to:

  - Maintain strong built edge to the Promenade with buildings that respect massing, scale & rhythm of adjacent properties.

  - Protect or enhance views of the Promenade & Seafront. Where appropriate new landmark features should be created.

  - Enhance & strengthen existing pedestrian linkages between the Seafront & Town Centre.

  - Contribute to the maintenance or enhancement of Seafront Gardens & other public spaces.

  - Support or enhance existing tourism related activities of Seafront area.

**Lord Street:**

- Development proposals, including conversions and changes of use, will need to:

  - Reinforce sense of entry into Lord Street through reinforcement or enhancement of existing gateway/landmark features.

  - Give architectural emphasis to junctions & corners along Lord Street.

  - Respect & relate to the scale, rhythm & proportion of neighbouring buildings. The use of gables, bays or other features to create an appropriate level of three-dimensional interest to upper floors will be required.

  - Elevations to infill development should have a strong vertical emphasis.

  - Maintain active retail or commercial frontages at ground floor level. The reuse of upper floors for residential
or commercial use will be encouraged.

- Retain, repair or reinstate historic shopfronts & canopies.

- Enhance & strengthen existing pedestrian linkages between Lord Street, the Seafront & the rest of the Town Centre. Where opportunity exists new links should be created.

- Contribute towards the enhancement of public spaces within the town centre.

- Maintain the level of tree coverage within Lord Street.

**Westbourne Road, Birkdale:**

- Development proposals, particularly in respect to infill development, backland development or extensions to dwellings should:

  - Respect the scale and massing of adjacent properties. Particular care should be taken in respecting floor to ceiling heights of existing properties & their setting within the landscape.

  - Avoid piecemeal development of rear plots particularly with the creation of short, unconnected cul-de-sacs.

  - Use gables, bays or other features to create an appropriate level of three-dimensional interest to elevations, break up mass of building, give vertical and horizontal emphasis & create variety and interest in the roofline.

  - Retain or reinstate period detailing, features or original materials including the retention of boundary walls, gateposts or other external features.

  - Ensure that car parking is designed to have a minimal visual impact on the street frontage.

- Maintain level of tree coverage within street scene.
Glossary

**Active frontage:** The use of buildings which front onto the road as shops or businesses increases the number of people on the street and promotes more natural surveillance. Having frequent doors, windows and balconies, with few blank walls can also help by adding interest to the public realm.

**Backland development:** Development on land at the back of existing buildings which face a road, for example, housing development in a large rear garden.

**Character:** See Local Character.

**Context:** The wider setting of a site or area, including factors such as traffic, activities and land uses as well as landscape and built form.

**Curvilinear development:** Development along, curved roads or boundaries. This is often typical of more modern housing estates, built since the end of World War II.

**Form:** The layout (urban grain), scale (height and massing), appearance (materials and detail) and landscape of the development, its individual parts and their relationship with neighbouring buildings, adjacent open areas and the local context.

**Grid-iron development:** (see Layout below) Development where the road and housing layout looks like a grid, (or squared paper like school maths books!) with has regular proportions and spaces. This is the commonest and the most traditional pattern for terraced houses built before 1919.

**Hard and soft materials:** This includes both ‘hard’ building materials such as bricks, tiles, slates and fencing and ‘soft’ landscaping such as trees, shrubs and grass.

**Hierarchical road layout:** Larger main roads (used by all sorts of vehicles) which have more smaller roads leading of them (likely to be used by fewer lorries or even buses) which may have even more smaller roads leading off them (used only by local vehicles).

**Infill development:** Development that uses up smaller vacant sites or spaces within the original settlement, that is, it fills in the gaps between existing buildings.

**Irregular Grid Layout:** (See Layout below and Grid-iron development above) A grid-iron layout where the spaces or blocks in the grid are different sizes and shapes, and roads are different not regular lengths.

**Layout:** How a development or area is set out, as seen from above. There are many different ways development can be laid out (just as there are many ways of laying a table!). So ‘road layout’ is the way roads look, as seen from above, ‘building layout’ is the way buildings are set out within a site or along roads, and ‘site layout’ is where things like buildings, parking area and paths are within a site, for example.

**Linear development:** See Ribbon development and Rectilinear development below.

**Local Character:** The overall atmosphere and ‘feel’ of a place or area, the things which give it an identity, make it different from (or similar to) anywhere else and make it what it is.

**Rectilinear development:** Development that consists of, or is contained by, straight roads or boundaries. This is often typical of traditional terraced housing, built before 1919.

**Ribbon development:** Development concentrated in a long, narrow strip along a road, railway line or even a river or canal.

**Scale:** The impression of a building when seen in relation to its surroundings, including its height and massing, or the size of parts of a building or its details. Sometimes it is the total dimensions of a building which give it its sense of scale: at other times it is the size of the elements and the way they are combined. The concept is
a difficult and ambiguous one: often the word is simply used instead of size.

**Streetscene**: Views along the street.

**Urban grain**: The pattern of the arrangement and size of buildings and their plots in a settlement; and the degree to which an area’s pattern of street-blocks and street junctions is respectively small and frequent, or large and infrequent.
Further Advice and Guidance

APPENDIX 1

Statement of public consultation

a The Planning Committee approved a draft ‘Design’ planning guidance note for feedback and to help it make decisions about planning applications on 5 June 2002. It was placed on our website later that year.

b The guidance was discussed at the meeting of the Sefton Agents’ Forum which was held in April 2003. Few comments or questions were raised during the meeting.

c We consulted interested organisations in July 2003. In total, we sent over 600 letters to local agents, developers, housebuilders and other interested groups (such as parish councils). We then consulted with the general public in September and October 2003. We placed adverts in the local press and the guidance was available in the two planning offices and at four main public libraries (the main library at Bootle was closed for repair in 2003).

d Our consultation procedure is in line with Planning Policy Guidance Note 12 ‘Development Plans’ (PPG12) which stresses the importance of consulting widely if we and the Secretary of State are to rely on Supplementary planning guidance notes to help make decisions about planning applications.

e We received a number of comments about the guidance from Formby Civic Society, Merseyside Civic Society, Government Office North West, Hitchcock and Wright and United Utilities. The table over the page summarises the comments we received, and our responses.

f We consulted Plain English Campaign on the guidance to help make its wording clearer.

g We revised the guidance to take account of the comments received during the consultation process, changes proposed to the draft plan, to correct mistakes in the guidance and to make the wording clearer in line with Plain English Campaign’s suggestions.

h We reported the results of the consultation process to the Planning Committee on 17 December 2003. The ‘Design’ guidance note, including a new Sustainability checklist in Part 4, was adopted on 17 December 2003.
