The management of Pressure Ulcers under Safeguarding across the Borough of Sefton

This guidance has been produced by a partnership of agencies working with adults in Sefton.
In the event of any changes to relevant legislation or statutory procedures this policy will be automatically updated to ensure compliancy without consultation. Such changes will be communicated.

2 Classification of Pressure Ulcers 12
3 Department of Health Adult Safeguarding Decision Guide 16
Introduction

Pressure ulceration is often preventable and the overarching guidance for pressure ulcer prevention and management is provided within National Institute for Clinical Excellence (NICE 2014) Clinical Guideline and Quality Standard 89 (2015).

This guidance has been produced to support practitioners across Sefton working with adults with care and support needs that may present with skin damage. It is based on the Department Of Health and Social Care guidance ‘Safeguarding Adults Protocol: pressure ulcers and the interface with a safeguarding enquiry (2018)’.

Where pressure ulcers do occur, this guidance offers a clear process for the management of removal and reduction of harm to the individual, whilst considering whether an adult safeguarding response under s42 of Care Act 2014 is necessary.

Scope

This document is intended for broad circulation supporting health and social care professionals, providers and across communities.

Overview

This guidance contains a critical document devised by the Department of Health and Social Care (2018) ‘Adult Safeguarding Decision Guide’ (Appendix 3) which will guide activities once the need for assessment of pressure ulcers is identified.

This document also contains three separate flowcharts providing guidance on the prompt management of pressure ulcers:

- Flowchart 1 – NHS Provider Acquired Pressure Ulcer (Appendix 1A)
- Flowchart 2 – Nursing Home Acquired Pressure Ulcer (Appendix 1B)
- Flowchart 3 – Residential / Domiciliary Care/ Community Acquired Pressure Ulcer (Appendix 1C)

This guidance contains information about how to classify pressure ulcers (Appendix 2).

Key Questions:
Does the individual have carers whether paid or unpaid?
- Pressure ulcers may occur as a result of neglect and acts of omission by a third party.

Is there evidence of neglect and acts of omission?
- If ALL care needs have not been met OR the individual has been denied / had delayed access to health, social care and education services OR the individual has been denied / had delayed access to medication, adequate nutrition and heating THEN there is a strong possibility that the pressure damage may have been avoidable.

Have the individual's needs or clinical presentation changed?
- Re-assessment of skin integrity and risk factors should be completed every time there is a change for the individual no matter how small.

What is pressure damage?
- Sustained pressure – prolonged contact between skin (particularly over a bony prominence) and a supporting surface.
- External shear force – i.e. when an individual slides down the bed (often seen on the sacrum and heels).

Could the pressure damage be prevented?
- Not all pressure damage is preventable.
- All individuals should be considered on an individual basis considering the risks (both internal and external).
- Care plans should be in place, reviewed and updates regularly and whenever there is a change for the individual.

Is the damage as a result of moisture?
- If the patient is incontinent or moisture is present this is NOT a pressure ulcer and shouldn’t be recorded as such.
- Consideration should still be given to how the skin damage occurred and whether or not it was as a result of neglect or acts of omission.

Has the individual recently moved / had surgery or an intervention?
- Everyone who has had surgery or moved from one care environment to another should have their risk of developing a pressure ulcer re-assessed (NICE 2015).

Have you checked the feet?
- Having little fat on them and coming into pressure contact with most surfaces feet are at high risk of pressure damage.
- Heels are the second most common area of pressure ulceration (Morton 2012).

HAVE YOU CONSIDERED RISK FACTORS AND ACTED APPROPRIATELY AND QUICKLY?
CAN YOU PREVENT DETERIORATION – EARLY INTERVENTION PREVENTS PRESSURE DAMAGE WORSENING

INCIPIENT PRESSURE ULCERS ARE NOT VISIBLE – DAMAGE MAY BE OCCURRING UNDER THE SKIN

REFER TO YOUR OWN AGENCY POLICY ON PRESSURE ULCER MANAGEMENT AND PREVENTION

RISK FACTORS TO CONSIDER

SKIN INTEGRITY ISSUES
- Current or previous pressure ulcers
- Low body fat
- Low muscle bulk

RISK ISSUES
- Ongoing use of medical devices
- Significantly limited mobility
- Wheelchair use
On identifying skin damage as a result of pressure, the Adult Safeguarding Decision Guide (Appendix 3) should be completed by a qualified member of staff who is a practising Registered Nurse (RN) with experience in wound management and not directly involved in the provision of care to the service user.

The decision guide **MUST** be completed within **48 hours** of identifying the pressure ulcer of concern. In exceptional circumstances this timescale may be extended but the reasons for the extension **MUST** be documented on the Decision Guide and in the individual’s care notes.

If further advice/support is needed to make the decision whether to raise a concern with Local Authority, consult your Adult Safeguarding Lead or the most senior manager within your organisation. The final decision to embark on a section 42 will remain with the Local Authority, informed by a clinical view.

The completed Decision Guide considers 6 key questions to determine if a concern needs to be raised with the Local Authority.

It is **CRITICAL** that the concern is raised immediately where:

1. There are concerns that the pressure ulcer developed as a result of carer **wilfully ignoring or preventing** access to care or services.
2. There are any concerns regarding **abuse or neglect** of the person receiving care.
Appendix 1

Flowchart 1 – NHS Provider Acquired Pressure Ulcer

Category 3/4 or multiple Category 2 identified as Trust acquired

Review internally & report on StEIS where indicated. Trust to follow StEIS review process

Pressure ulcer risk decision guide (appendix 3) to be built into Trust internal incident review / StEIS processes

Safeguarding adult concern to be raised when deliberate harm or neglect is identified as part of incident review / investigation

Sefton Council initiate section 42 enquiry
Appendix 1B

Flowchart 2 – Nursing Home Acquired Pressure Ulcer

Category 3/4 or multiple Category 2 identified

Hospital/Community Trust

Identifier to inform Sefton Council and ensure Provider completes Decision Guide (Appendix 3)

Nursing Home

Identifier to inform Sefton Council and complete Decision Guide (Appendix 3). Consider Submission to CQC

Decision Guide (Appendix 3)

Score 15+
Automatic safeguarding concern to be raised by the Provider to Sefton Council within 24 hours

Provider to await contact from Sefton Council and ensure retention of all appropriate evidence

Score below 15
Provider to inform appropriate commissioner i.e. Sefton Council or Sefton CCG's email within 24 hours
Appendix 1C

Flowchart 3 – Residential/ Domiciliary Care/ Community / Own Home Acquired Pressure Ulcer

Category 3/4 or multiple Category 2 identified

Identifier to raise safeguarding adult concern to Sefton Council

Sefton Council to identify whether community nursing service is currently engaged with service user

YES

Review internally and report on StEIS where Indicated. Trust to Follow StEIS review process. No safeguarding concern needed at this stage

Complete Decision Guide (appendix 3)

NO

Enquiries to commence
### CATEGORY (GRADE) 1
- Intact skin. Non blanching redness.
- Usually occurs over bony prominence.
- Individuals with dark skin, observe for additional signs e.g. warmth, oedema, pain, hardness.

### Blanching redness
![Blanching redness Image]

### Non blanching redness
![Non blanching redness Image]

### CATEGORY (GRADE) 2
- Superficial skin loss. Pink/Red wound bed.
- May be very minimal slough with healthy tissue clearly evident. May present as a clear filled blister with no discoloration underneath.

### Superficial skin loss
![Superficial skin loss Image]

### Clear blister
![Clear blister Image]

### CATEGORY (GRADE) 3
- Full thickness tissue loss. Subcutaneous fat may be visible but bone/tendon/muscle are not exposed.
- Depth may vary depending on anatomical location.

### Full thickness tissue loss
![Full thickness tissue loss Image]

### CATEGORY (GRADE) 4
- Full thickness loss. Can extend to expose bone/tendon or muscle or they may be directly palpable. Depth can vary by anatomical location.

### Full thickness loss
![Full thickness loss Image]
### POTENTIAL DEEP TISSUE DAMAGE

A localised area of purple discoloration over intact skin, or blood blister, due to damage of underlying soft tissue. It may be painful, firm, mushy, boggy, warmer or cooler compared to the adjacent skin. May develop into a category 3 or 4 but cannot be confirmed until extent of damage is evident. Damage may be recoverable with effective ‘off-loading’ of affected area.

### UNSTAGEABLE

**GRADE TO BE DETERMINED AT A LATER DATE**

Minimal category 3 but potential 4. The wound bed is not visible due to presence of slough or necrotic tissue. Classification may not be possible until the ulcer is debrided.
### Moisture Associated Skin Damage - Pressure Ulcer or Moisture Associated Skin Damage?

6. Answer (a) if your patient has capacity to consent to every element of the care plan. Answer (b) if your patient has been assessed as not having capacity to consent to any of the care plan or some capacity to consent to some but not the entire care plan.

Patient followed some aspects of care plan but not all: | 3 |
Patient followed care plan or not given information to enable them to make an informed choice: | 5 |

Patient has not followed care plan and local non-concordance policies have been followed: | 0 |
Patient has followed some aspects of care plan but not all: | 3 |
Patient has followed care plan or not given information to enable them to make an informed choice: | 5 |
Patient has not followed care plan and local non-concordance policies have been followed: | 0 |
If the score is 15 or over, discuss with Sefton Council reflecting the urgency of the situation. When the decision guide has been completed, even when there is no indication that a safeguarding alert needs to be raised the tool should be stored in the patient’s notes.

Note: Where there is suspected abuse or neglect the health care practitioner MUST immediately submit a safeguarding concern, irrespective of Category of Pressure Damage.
